

## Fire and Heat

We need heat in our homes for warmth and for cooking. But fire and hot things can be dangerous because they can burn us.

**These can be dangerous!**

### Watch out for:

- fires, barbecues and fireworks
- matches, candles, cigarettes, electrical cables and sockets, and things left too close to heat - all of these things could start a fire
- hot things in the home, like ovens, heaters, lamps, toasters, irons and saucepans - keep away and don't touch
- hot water from the hot tap, kettle, saucepan or even hot drinks!

**Tip**

**If you burn yourself, get an adult to help. Hold the burn under cold running water for at least 10 minutes.**

### Did you know?

Most home fires start in the kitchen.
