

Now you see it now you don't

What you need

Glass of water

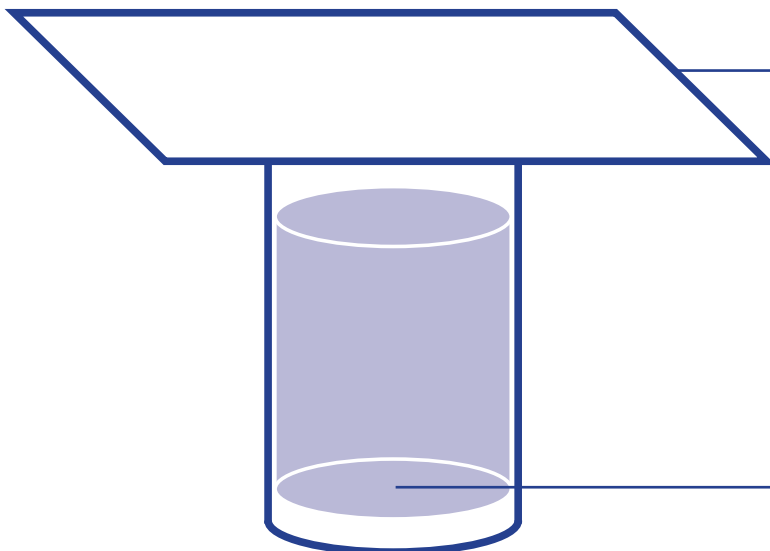

Stamp or Button

A postcard or piece of paper

Now try this

Fill a glass tumbler with water and carefully put it on top of a stamp or a button or any other small item. **What do you see?**

Put the postcard, or piece of paper on top of the glass. The card/paper shuts off the refracted light rays

The stamp or button underneath

We bet you can't see the stamp or the button, whatever angle you look at it! It's totally invisible!

It's the phenomenon of refraction!
